# 1 List of usual values and safeguard settings - general

For each system of the engine the tables in the chapter that follows give the values for usual operation and the trigger values for safeguard settings.

#### 1.1 Tables - identification

The tables give the data that follow:

#### Description

This list gives the description of the object or of the system.

#### Medium / physical value / location

This list gives the data that follow:

- Medium that is monitored
- Physical parameter and unit
- Location of the measurement

#### Usual operation (value or range)

This list gives the setpoint or the approximate range for usual operation. During operation the current values can have small differences to the given values.

#### Signal number

This list gives the signal number as follows (refer also to Para 1.2):

- First two letters (XX) Function code
- Four digit number of the signal (for example 10NN)
  - First two numbers Function group
  - Second two numbers Running number
- -nn If more than one signal of the same type is applicable (for example TE2501nnA is TE2501A, TE2502A, TE2503A)
- Last letter Applied system

#### Function

This list gives one of the functions that follow:

- ALM Alarm
- GTrip Gas Trip (the ECS changes to diesel mode)
- O SLD Slowdown
- O SHD Shutdown

#### Level

This list gives one of the levels that follow:

- D Deviation
- O H High
- O L Low

## • Trigger value

This list gives the value at which the related safeguard function starts.

For the analysis elements (AE) of concentration:

max - maximum concentration

For the level switches (LS) and flow switches (FS):

- o min minimum or no flow
- o max maximum flow

#### Delay

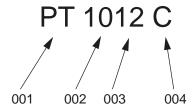

This list gives the delay of the action (in seconds) after the trigger value occurs.

outlet each cylinder (engine outlet)	90 +/-4 2		SLD	Н	≥ 97	60
Scavenge air cooler (SAC)						
SAC LT cooling water / pressure [bar] / engine inlet	2.5 to 4	PT1361A	ALM	L	≤ 2.0	0
SAC LT cooling water / temperature [°C] / engine inlet	25 to 36 <sup>3</sup>	TE1371A	ALM	L	≤ 21	0
SAC LT cooling water / temperature [°C] / outlet each SAC	25 to 75	TE1381-nnA	ALM	Н	≥ 80	0

- 1 This value is applicable for stable operation condition.
- 2 This value is applicable for transient operation condition.
- WinGD recommends a setpoint value of 25°C. 36°C is only permitted if the seawater temperature is 32°C.

Crosshead bearing oil / temperature [°C] /	45 to 60	TE2301-nnA	ALM	Η	≥ 65	0
outlet each crosshead bearing (optional)			SLD	Η	≥ 70	60

- 1 This value is applicable for stable operation condition.
- 2 This value is applicable for transient operation condition.
- 3 The trigger value is only applicable above 40% engine load.
- The trigger value is not applicable when the engine has stopped.
