Removal of Delta Tuning for diesel engines

All WinGD diesel engines

Removal of Delta Tuning

WinGD has decided to remove the option of Delta Tuning for all diesel engines due to low demand. Other tunings which are optimised for part load operation are preferred by customers. The following tunings are currently available for all WinGD diesel engines:

- Delta Bypass
- Low-load

The Delta Bypass Tuning is used as the default choice in WinGD product documentation. The Delta Tuning will be removed in the next GTD release. Other product documentation from WinGD, including the Marine Installation Manuals (MIMs), engine booklet, etc. will be updated accordingly with each new release.
