Removal of Standard Tuning for diesel engines

All WinGD diesel engines

Removal of Standard Tuning

WinGD has decided to remove the option of Standard Tuning for all diesel engines due to low demand. Other tunings which are optimised for part load operation are preferred by customers. The following tunings are currently available for all WinGD diesel engines:

- Delta
- Delta Bypass
- Low-load

The Delta Tuning is used as the default choice in WinGD product documentation. The Standard Tuning will be removed from the GTD (version 2.16.0.0) which is expected now for release in early February 2022. Other product documentation from WinGD, including the Marine Installation Manual (MIM), engine booklet, etc. will be updated accordingly with each new release.
